Sleep deprivation reduces attention, alertness, vigilance, and decision-making ability by 50%; communication skills by 30%; and memory by 20%.

Sleep deprivation also contributes to depression, irritability, mood disorders and the ability to reason.

Sleep deprivation costs the United States economy as much as 100 Billion, yearly, due to lost productivity, medical and legal costs and damage to property and environment.

1) Ingham Regional Medical Center - Paying the Price for Sleeplessness
Current “Solutions”

Popular pharmaceutical based sleeping aids which come with risk of addiction and a myriad of other negative physiological and psychological side effects.

Exterior sound generators which often disturb the patient’s bed partner or roommate, creating additional stress; reducing the patient’s use of the device.

Headphones and ear buds become uncomfortable and disruptive as sleeper changes position throughout the night. Disruptions easily awaken a sleeper in REM sleep - an active and critical sleep stage for the brain.
A Better Solution: The Sound Pillow Sleep System

100% Natural sleeping aid includes:

**Sound Pillow:** Comfortable hypoallergenic pillow with two stereo speakers buried deep within a plush pillow. Speakers are hidden and do not disrupt sleeper thus allowing sleeper to experience all sleep stages.

**MP4 Player** pre-loaded with binaural-sleep sustaining music, nature sounds and affirmations.
In-Clinic Test Methodology

Test participants were individuals in various stages of addiction recovery as sleeplessness is especially widespread in this group.

Participants received:

Sound Pillow

MP4 Player Pre-Loaded with 14 1/2 hours of Binaural Music, Nature Sounds and Affirmations

Participants slept with the system for 2-Weeks then answered individual questionnaires.

Clients’ counselors also completed questionnaires.

Responses were Double Blind.

Why the Sound Pillow Sleep System Works

The Sound Pillow is comfortable and does not disrupt users’ sleep. Thus allowing sleeper to experience all sleep cycles.

Sleep system’s music is slow with no loud punctuations of sound or fast tempos - does not disrupt sleeper.

The binaural music slows cardiovascular and respiratory systems, as well as brain activity. Allowing for deep relaxation.

Sound Pillow’s sound quality is very good. Thus the nature sounds & music reproduced are natural and pleasing to the sleeper.

Sound Pillow’s stereo speakers are positioned near the sleeper’s head, allowing only the sleeper to hear and experience the sounds. Does not disrupt bed partner or roommate.
Conclusion

The Sound Pillow Sleep System provides the user with a comfortable and non-disruptive night’s sleep. Thus allowing the sleeper to experience all sleep cycles required for meaningful-rejuvenating sleep. Which in turn showed to enhance test clients’ moods, attitudes and overall outlook of success.

In virtually all cases, test clients became more pleasant to be around, having a positive effect on others around them.
